

# Explainability Report

## Global dataset report

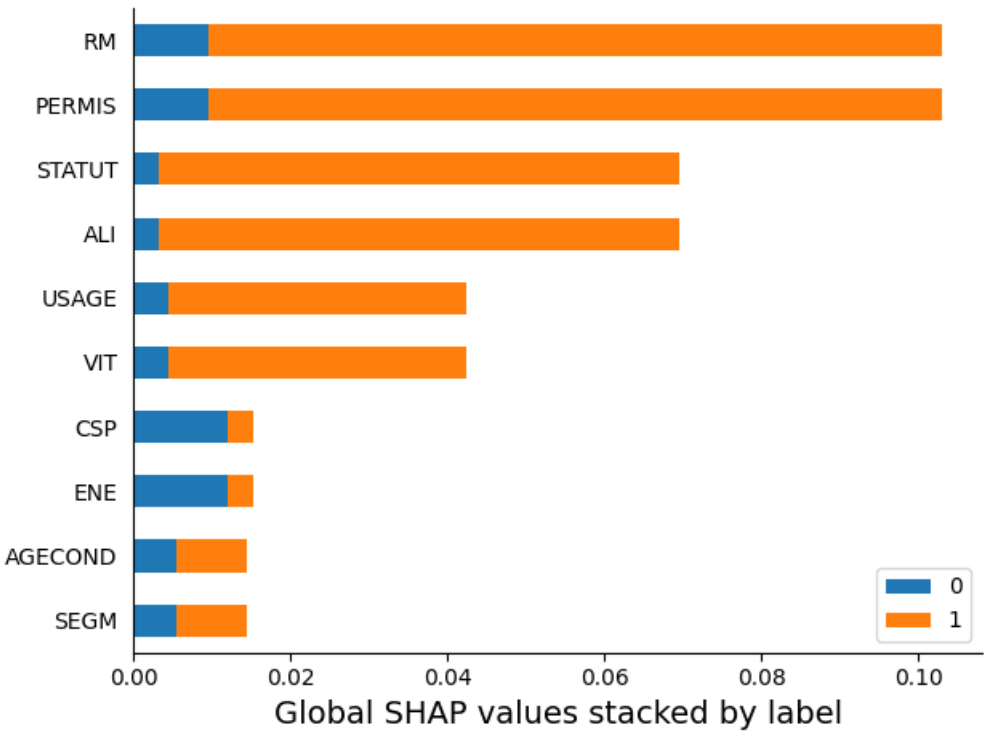

This report is the output of the Amazon SageMaker Clarify analysis. The report is split into following parts:

- 1. Model explanations

### Model explanations

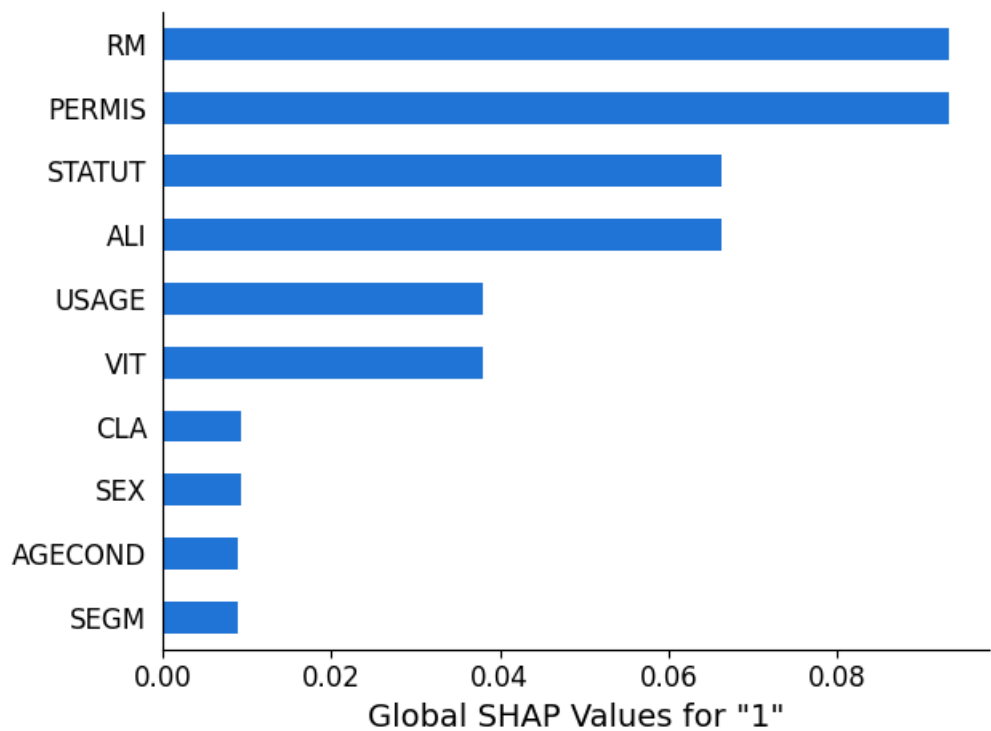

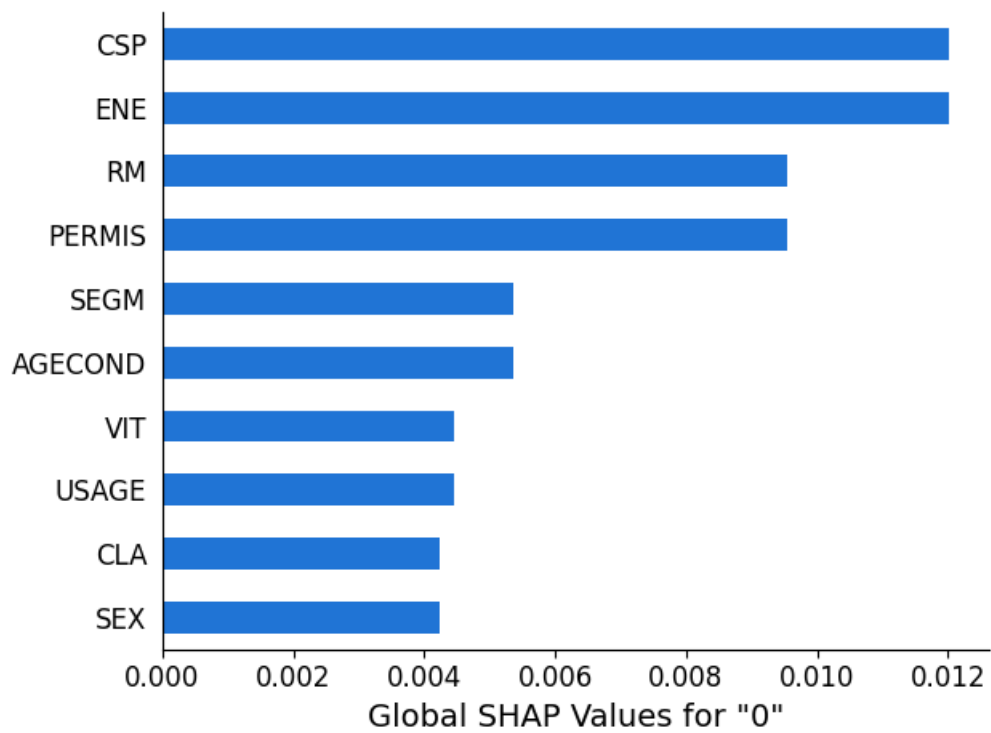

#### SHAP Explanations for all labels

The Model has 16 input features and 2 output labels. We computed KernelShap on the dataset and display the 10 features with the greatest feature attribution summed up over all the labels.

#### SHAP Explanations for individual labels

We computed KernelSHAP explanations on the dataset. For each label, we display the 10 features with the greatest feature attribution. You have 2 label(s).
